SaaS commerce intelligence platform – PO automation and e-commerce data

Gurugram, Haryana (Remote)

- Work on end-to-end **ETL pipelines (Python, SQL)** that extract, validate and load **purchase order (PO) data** from email and vendor portals into **SAP-integrated** client systems.
- Monitor **production workflows** across multiple client accounts, diagnosing failures through **root cause analysis** to keep data accurate and on schedule.
- Develop and maintain **Python** scripts (**Selenium, BeautifulSoup**) for **web scraping** and data extraction across varied portal structures, updating logic as business rules change.
- Write **SQL queries** on relational databases for **data validation, data quality and reporting**.
- Automate several recurring manual tasks with **scheduled jobs**, improving **process efficiency**.
- Collaborate with **clients and cross-functional teams** on **requirement gathering** and **EDI integration**.
- Use **GenAI tools** (Claude, Copilot, Cursor) and explore **Agentic AI** to accelerate automation.

Projects

WeatherRetail Intelligence | *Python, PostgreSQL, SciPy, Streamlit* | [Live App](#) | [GitHub](#)

2026

- Built a **PostgreSQL star-schema pipeline** blending 35K simulated sales with real weather data; **OLS regression**, checked against a control category, reveals which products sell on the weather.
- Converts the 7-day forecast into a **0–100 stockout risk score** and store-level reorder list.

AI Data Analyst Agent | *Python, Gemini API, DuckDB, Streamlit* | [Live App](#) | [GitHub](#)

2026

- Built an **agentic text-to-SQL assistant** for 99K e-commerce orders that **self-corrects** failed queries.
- Answers in tables, charts and insights; its **anomaly detection** flagged freight costs 15x the average.
